Subject: Re: Shiloh Church Rd - Next steps

Forgot to add, other than 2:00-3:00, I have nothing specific scheduled today, so give me a call at your convenience.

Good Morning Dominic,

Thank you for spending so much time with me over the past week discussing next steps at Shiloh. After much consideration, I am withdrawing my request for change in scope at this time pending further evaluation and discussion

The current actions are expected to be completed by early July

- Excavation and disposal of PCB-contaminated soil
- Excavation and disposal of RCRA contaminated soil
- Removal of remaining radiation debris

The remaining contamination addressed in the action memo includes

1. Subsurface contamination in the former drum area
2. Areas where PCB contamination in surface soils is > 1mg/kg but less than 25 mg/kg. These are heavily wooded areas near power lines which are also near a major highway. Risk of exposure here is very low
3. Lead contamination on Property 3 > 400 mg/kg

I discussed these issues in the briefing last week. I am rapidly approaching the remaining budget in my removal ceiling. I expect we will be finished with staged soil T&D and radiation removal by 7/10/21. In

order to preserve remaining funds (est \$1 mil), I am proposing we demobe all personnel and equipment from the Site at that time and re-evaluate options for the 2 items above.

The former drum area subsurface contamination has been evaluated on 4 different occasions, including two separate geoprobe investigations. I would like to discuss this with you and Don in more detail sometime in the next few weeks.

Please give me a call later today if you have time
Thanks for spending several hours with me since last week discussing these issues

Chris
